

Use the following **checklist as a guide** to what you **should** include on the website

Outcome 1 - Develop an interactive web site using HTML, CSS and JavaScript

- Use HTML tags, elements and attributes
- Use CSS rules, selectors and properties
- Use JavaScript objects, properties, methods and events
- Create well-structured and easily maintainable code
- * Use JavaScript and HTML Document Object Model (DOM)
- * Use DOM Programming Interface

* these are covered in a separate assignment exercise out-with the responsive website

Outcome 2 - Expand the functionality of the site making use of libraries, APIs, and scripts

- Use a minimum of one common HTML API
- Use a minimum of one JavaScript API
- Use a minimum of one library

Outcome 3 - Enhance the user experience by making use of advanced CSS and HTML

- Use CSS for responsive sites that can adapt to different devices
- Use CSS for a variety of effects to enhance the user experience
- Add graphics using HTML Graphics
